

Environmental Policy Statement

We fully accept our individual and collective responsibilities to protect the environment and ecology, both in our business activities at our workplace and in relation to work at our customers sites.

We and our contractors comply with relevant environmental legislation, specifically EU directives and other statutory requirements relating to our Building Services operations in the public and commercial sectors, also our Specialist Construction projects in Medical, Education and Housing. We aim to exceed requirements relating to environmental aspects through ongoing awareness and assessments then continual improvement, setting an example to others of good environmental management.

We have controls and procedures to prevent or reduce pollution, noise and other nuisance, reduce consumption of natural resources and energy, and to continually improve on current and any newly identified environmental aspects of our company. We manage waste in a considerate and lawful manner.

We seek to maintain good relations with regulatory bodies.

We design product with consideration to environmental aspects, follow the principles of the Waste Hierarchy and where possible work with suppliers who have a sound Environmental Management System (EMS).

On an annual basis we will review, monitor and analyse our Environmental objectives and targets.

In order to achieve our aims we operate an EMS meeting the requirements of our business and BS EN ISO 14001.

All employees and contractors are committed to this policy and programme, which is published and periodically reviewed for continuing suitability and achievement.

Brian Way, Director DM Habens (The Builder) Ltd.
